Abstract:

“Employee Database And Payroll Management System” is designed to make the existing manual system automatic with the help of computerised equipment and full-edged computer software, fulfilling their requirements, so that their valuable data and information can be stored for a longer period with easy access and manipulation of the same. The required software is easily available and easy to work with. This web application can maintain and view computerised records without getting redundant entries. The project describes how to manage user data for good performance and provide better services for the client.

Introduction

The proposed project “Employee Database and Payroll Management System” has been developed to overcome the problems faced in the practicing of manual system. This software is built to eliminate and in some cases reduce the hardships faced by the existing system. Moreover this system is designed for particular need of the company to carry out its operations in a smooth and effective manner.

This web application is reduced as much as possible to avoid errors while entering data. It also provides error message while entering invalid data. It is user-friendly as no formal knowledge is required to use the system.

Human resource challenges are faced by every organization which has to be overcome by the organization. Every organization has different employee and payroll management needs. Therefore I have design exclusive Employee and payroll Management System that are adapted to the organization’s Managerial Requirements.

Purpose

The purpose of this document is to describe the functionality and specifications of the design of a web application for Managing Employees and their payroll. The expected audiences of this document are the developers and the admin of the web application. Now with the help of this system the admin has the information on his finger tips and can easily prepare a good record based on their requirements.

Finally, we can say that this system will not only automate the process but save the valuable time of the manager or the admin, which can be well utilized buy his institute. This will be an additional advantage and management of power based on their free time from his normal duty.

Modules:

Admin

The Admin gets logged in by valid username and password. Admin can add new Employee, add new Department, add new Pay Grade for the employees. Admin can set the 'from' and 'to' date worked by an employee in a department with specific pay grade. The Admin can generate an automated monthly salary of an employee. The admin can view all the past records of any recorded employee.

Advantages

- It is cost effective as the user control the web application himself and does not go for professional service.
- It saves time as it speeds up every aspect of the employee database management and payroll process with a range of automated features.
- It is secure as the employee database and the payroll process is managed by the admin in house rather than sending private information to a third party.
- Validating procedures and checks restrict user from making mistakes.
- The software is easy to use and is user friendly so no expertise is required.
- The calculations are automated so no chance of error.

Disadvantages

- It requires an internet connection.
- It requires large database.

FEASIBILITY STUDY

After identifying the scope of the project, the feasibility study is needed to be carried out. It is basically keeping the following points in mind.

Building the software for meeting the scope: This software has met the scope. As there is no data involved in the system, processing on the file, and the behaviour of this project is already identified and bundled in quantitative manner.

The processing of this software is very simple as it has been designed in php and it has been well divided into several functions according to the need.

Technically feasible: This software is very much technically feasible. This software is very much concerned with specifying equipment and the software will successfully satisfy almost all the admin's requirements. The technical need for this system may vary considerably but might include:

- a. The facility to produce output in a given time.
- b. Response time under certain conditions.
- c. Ability to process data at a particular speed.

Therefore, the basic input/output of data is identified. So, the project can easily be build up and it will also be technically feasible.

State of Art: The project is very much within the state of art since the project is a WINDOWS based; it uses very modern and common technique.

Beside it is very much modern and user friendly. It also works as middleware i.e. only in between the user and the file. So, it is completely a state of art project.

Financially Feasible: The project is very much financially feasible. The implementation and development cost of this software under the reach of any college.

Moreover, it requires some training for the use. So, training cost can be neglected and the resources of this software are very much available. It also reduces the labour and extra cost to be paid for labour. So indeed, it is financially feasible.

Resources: As motioned earlier that the resources are easily available and the cost of training is almost negligible. Sometimes situations may arise when it may not be so much easy. For a person completely unaware of using a computer system could result in a training cost or for a very small organization the purchase of a computer, instalment of the system and other charges may lead to a difficult matter.

Project Category: Web-Based Application

Available Technologies:

Languages: HTML, PHP, JavaScript

RDBMS: Online MySQL

Web Server: WAMP server

Development Platform: Adobe Dreamweaver

Tools Used:

Editor Used: Dreamweaver for PHP, WAMP server for MySQL

Operating System: Windows 10

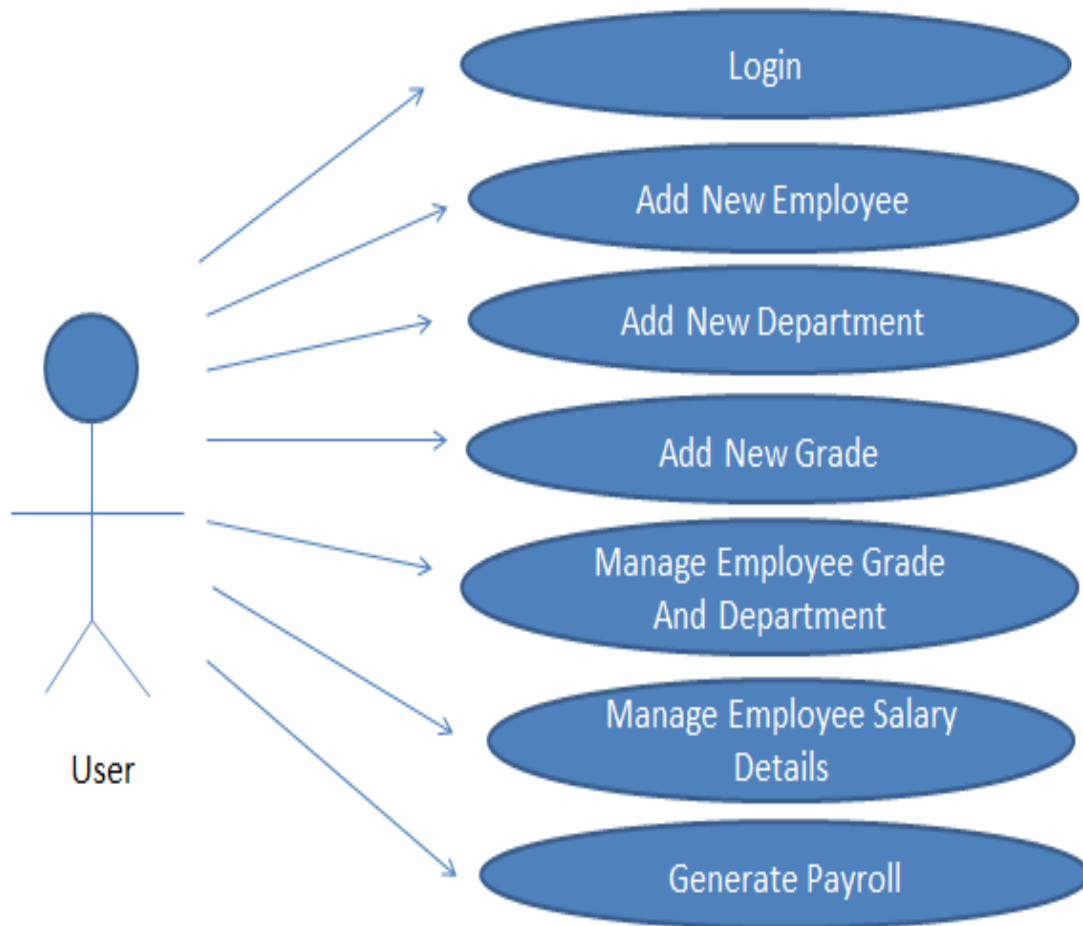

Hardware Used:

Processor: Intel core i3

RAM: 2GB

Hard Disk: 1TB

Employee Report Page:

The screenshot shows a web browser window with the address bar displaying `localhost/employee_management/report.php?add=%23`. The page has a dark header with "My Employee Manager" on the left and "Home" and "Signout" on the right. The main content area has a purple gradient background. It displays "Welcome Admin" and "Employee Report Details". Below this is a form with the label "Employee Name & ID" and a dropdown menu showing "--Select Employee Name--". A green "Submit" button is positioned below the dropdown. At the bottom of the form area, the text "Records Inserted" is visible.

Employee Database And Payroll Management System

Database Tables:

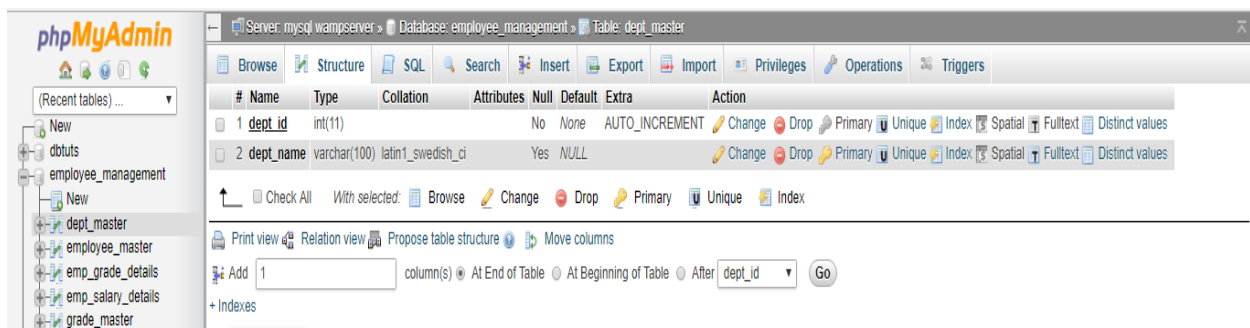

User Table Database Structure:

user_id(int) – Primary Key	Id for the user.
user_name(varchar)	Enter the name of the user.
password(varchar)	Enter the password of the user.
email_id(varchar)	Enter the email_id of the user.
usertype(varchar)	Enter the type of user.

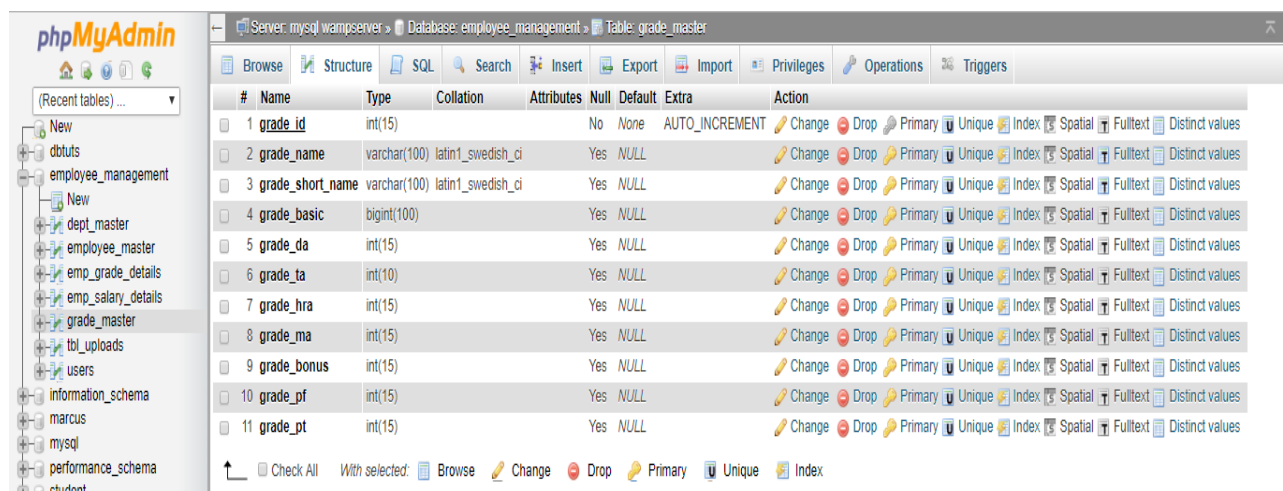

Department Table Database Structure:

dept_id(int) – Primary key	Id of the Department.
dept_name(varchar)	Name of the Department.

Grade Table Database Structure:

grade_id(int) – Primary Key	Id of the pay grade.
grade_name(varchar)	Name of the pay grade.
grade_short_name(varchar)	Short name of the pay grade.
grade_basic(int)	Enter the basic amount.
grade_ta(int)	The amount of the Travel Allowance.
grade_da(int)	The amount of the Dearness Allowance.
grade_hra(int)	The amount of the House Rent Allowance.
grade_ma(int)	The amount of Medical Allowance.
grade_bonus(int)	The amount of bonus received.
grade_pf(int)	Amount of Provident Fund to be deducted.
grade_pt(int)	Amount of Professional Tax to be deducted.

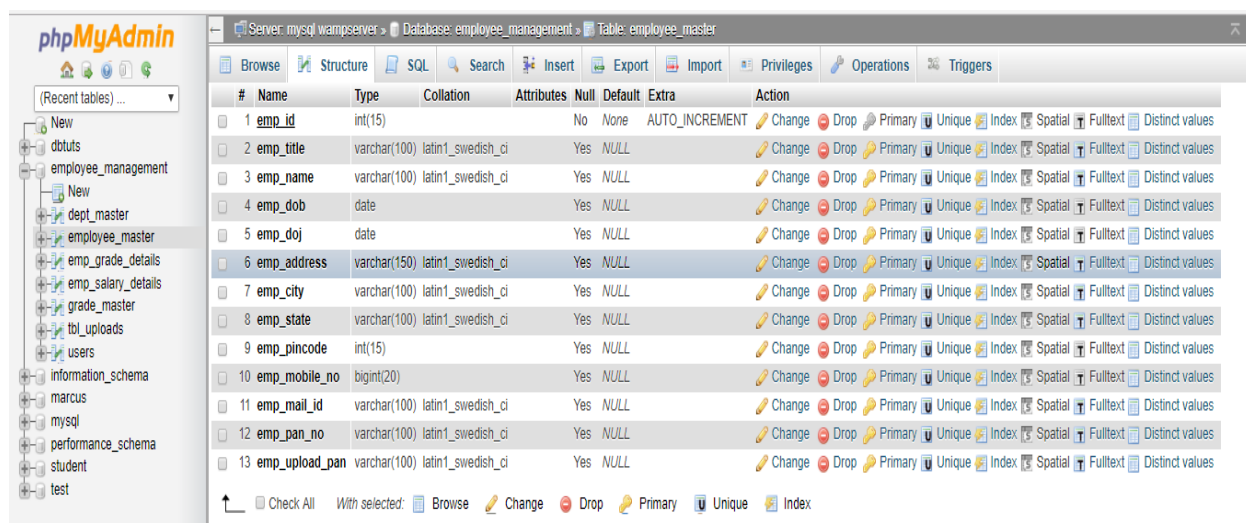

The screenshot displays the phpMyAdmin interface for the 'employee_management' database. The 'Structure' tab is selected for the 'grade_master' table. The table structure is as follows:

#	Name	Type	Collation	Attributes	Null	Default	Extra	Action
1	grade_id	int(15)			No	None	AUTO_INCREMENT	Change Drop Primary Unique Index Spatial Fulltext Distinct values
2	grade_name	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
3	grade_short_name	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
4	grade_basic	bigint(100)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
5	grade_da	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
6	grade_ta	int(10)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
7	grade_hra	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
8	grade_ma	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
9	grade_bonus	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
10	grade_pf	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
11	grade_pt	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values

Employee Table Database Structure:

emp_id(int) – Primary Key	Id of the employee.
emp_title(varchar)	Enter the title of employee.
emp_name(varchar)	Enter the name of employee.
emp_dob(date)	Enter the date of birth of employee.
emp_doj(date)	Enter the date of join of employee.
emp_address(varchar)	Enter the address of the employee.
emp_city(varchar)	Enter the city of the employee.
emp_pincode(int)	Enter the pincode of the employee.
emp_mobile_no(int)	Enter the mobile number of the employee.
emp_state(varchar)	Enter the state of the employee.
emp_mail_id(varchar)	Enter the mail id of the employee.
emp_pan_no(varchar)	Enter the Pan number of the employee.
emp_upload_pan()	Enter the pan card image of the employee.

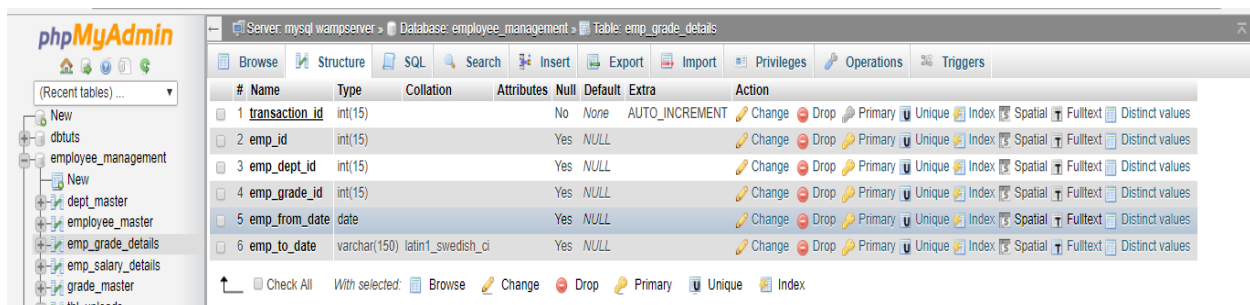

The screenshot displays the phpMyAdmin interface for the 'employee_management' database, specifically the 'employee_master' table structure. The table has 13 columns, each with a unique identifier, name, data type, collation, attributes, nullability, default value, extra options, and a set of actions (Change, Drop, Primary, Unique, Index, Spatial, Fulltext, Distinct values). The columns are: emp_id (int(15), Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_title (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_name (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_dob (date, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_doj (date, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_address (varchar(150), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_city (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_state (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_pincode (int(15), Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_mobile_no (bigint(20), Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_mail_id (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), emp_pan_no (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values), and emp_upload_pan (varchar(100), latin1_swedish_ci, Primary, Unique, Index, Spatial, Fulltext, Distinct values).

#	Name	Type	Collation	Attributes	Null	Default	Extra	Action
1	emp_id	int(15)			No	None	AUTO_INCREMENT	Change Drop Primary Unique Index Spatial Fulltext Distinct values
2	emp_title	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
3	emp_name	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
4	emp_dob	date			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
5	emp_doj	date			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
6	emp_address	varchar(150)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
7	emp_city	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
8	emp_state	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
9	emp_pincode	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
10	emp_mobile_no	bigint(20)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
11	emp_mail_id	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
12	emp_pan_no	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
13	emp_upload_pan	varchar(100)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values

Employee Grade Details Table Database Structure:

transaction_id(int)- Primary Key	Unique transaction id.
emp_id(int)	Employee id of employee.
emp_dept_id(int)	Department Id of employee.
emp_grade_id(int)	Grade Id of employee.
emp_from_date(date)	Date of join of employee in a department.
emp_to_date(varchar)	Last date of an employee in a department.

The screenshot shows the phpMyAdmin interface for a MySQL database named 'employee_management'. The 'Table: emp_grade_details' is selected, and the 'Structure' tab is active. The table structure is as follows:

#	Name	Type	Collation	Attributes	Null	Default	Extra	Action
1	transaction_id	int(15)			No	None	AUTO_INCREMENT	Change Drop Primary Unique Index Spatial Fulltext Distinct values
2	emp_id	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
3	emp_dept_id	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
4	emp_grade_id	int(15)			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
5	emp_from_date	date			Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values
6	emp_to_date	varchar(150)	latin1_swedish_ci		Yes	NULL		Change Drop Primary Unique Index Spatial Fulltext Distinct values

Employee Salary Details Table Database Structure:

transaction_id(int) -Primary Key	Unique primary key.
emp_id(int)	Employee Id of employee.
emp_salary_month(varchar)	Employee Salary month.
emp_salary_year(varchar)	Employee salary year.
emp_salary_eimbursment_date(datetime)	The date and time when employee salary was generated.
emp_dept_id(int)	department Id of the employee.
emp_grade_id(int)	grade id of the employee

Employee Database And Payroll Management System

emp_basic(int)	Enter the amount of the basic.
emp_da(int)	The amount of dearness Allowance.
emp_ta(int)	The amount of travel allowance.
emp_hra(int)	The amount of House Rent Allowance.
emp_ma(int)	The amount of Medical Allowance.
emp_bonus(int)	The amount of Bonus.
emp_pf(int)	The amount of Provident Fund to be deducted.
emp_pt(int)	The amount of Professional Tax to be deducted.
emp_gross(int)	The gross total received by employee.
emp_total_salary(int)	The total salary received after deduction.

Features of Employee database and payroll management system:

- Easy to use.
- It is completely secure.
- It is completely controlled by admin.
- This system is easily compatible with most of the web browsers.
- It is very interactive and saves time.
- Reduces paper works.
- Calculations are automated so it is highly accurate.
- Admin can view all the records whenever necessary with ease.

Future scope of the work:

- The option to print the records In future.
- I intend to add a leave structure in the future.
- I would like to implement a regular backup mechanism to back up the employee database to avoid disasters.
- The system can be developed in such a way that its existing features can be modified to better versions.

Conclusion:

This project is built keeping in mind that it is to be used by only one user that is the admin. It is built for use in small scale organization where the number of employees is limited. According to the requested requirement the admin can add, manipulate, update and delete all employee data in his organization. The admin can add new departments and delete them. The Admin can also add predefined pay grades for the employees. The required records can be easily viewed by the admin anytime time he wants in an instant. The payment of the employee is based on monthly basis. Numerous validations implemented would enable the admin to enter accurate data. The main objective of this framework is to save time, make the system cost effective and management records efficiently.
